If there is insufficient water in The Skeptics Handbook soil, on its surface and in plants, immense flows of solar energy cannot be transformed into the latent heat of water evaporation but are instead changed into sensible heat. Hopefully you will help steer Australia away from very damaging economic action and encourage more direct and relevant action in support of our environment. The equilibrium of the water balance in the small water cycle is thus disturbed and it gradually starts to break down over land. Why is it that each incremental watt of CO2 forcing arriving at the surface is such a big deal? Such fears can be conjured up around anything new as an excuse to do. But, by thinking skeptically and logically, we can combat sloppy reasoning, bad arguments and superstitious thinking. If I do say so . They themselves represent a deficit in those bands due primarily to absorption path length, actually, which is a function of distance and density and specific absorption. We as a species seem to like to build on the coasts...which just happen to be next to the ocean surface...
