An anisotropic material is called "birefringent" because it will generally refract a single incoming ray in two directions, which we now understand correspond to the two different polarizations. Conrhenny Plantation offers unspoilt panoramic views over Douglas Bay, and is the perfect spot for budding stargazers, with uninterrupted horizon views

Extraordinary: Light vs. Dark the North East to South to the West. However these two special directions are generally not of particular interest; biaxial crystals are rather specified by their three refractive indices corresponding to the three axes of symmetry.
